The Red Button relieves the strain

GRUBER Assist – the invisible ascent aid:

As soon as you press the turbo button at the end of the handlebar, the burning sensation in your thighs vanishes, but the healthy sweat stays. The lightweight ascent aid comes up with 200 watts more motor-power – up to 100% performance increase for 100 min. maximum. We promise a pleasant cycling experience without strain!

Product Features

- Power going uphill
- Speed on level ground
- Assistance against head wind
- Built-in so you can't see it (Retrofit)
- Healthy fitness cycling
- Light weight

GRUBER Assist is suitable for everyone:

Hobby cyclists wishing to ease the torturous uphill ride when need be, as well as, of course, sports men and women who want to organise their training more effectively and not be dependent on the terrain.

GRUBER Assist works in the background, letting you concentrate on what you love doing most – biking.

GRUBER Assist- your Cycling Assistant

Optimal Training at the Touch of a Button – GRUBER Assist makes Cycling healthier:

Hard to find enough time for regular exercise? Do you exercise within the ideal pulse rate? With our built-in “tailwind”, you can reduce the strain on your body by switching on the motor during your journey. In doing so, the motor assistance decreases the harder you pedal and vice versa. Anaerobic exercise is not necessary! Back pain is also alleviated thanks to the relaxed way **GRUBER Assist** allows you to cycle!

GRUBER Assist is invisible:

Our motor can be built into almost all conventional frames and it's invisible. The battery sits in a normal saddlebag.

GRUBER Assist is very easy:

The engine-transmission combination weighs no more than 900g. The NiMH (1,700g) or LiION Mangan (1,000g) battery gives you up to 100 minutes of motor-assisted cycling.

Retrofit – GRUBER Assist is not dependent on bicycle brand:

Our motor is suitable for all bikes as the seat tube is straight and has an inner diameter of 31.6 mm.

Feel great and socialise at the same time – GRUBER Assist gives you speed and power:

The psychological effect of being able to turn the motor on or off any time you like alone raises your performance levels and makes biking even more fun, especially in a group.

Fancy a go? More information?

Don't hesitate to contact us. You'll see just how impressed you will be by the superb feeling and fun factor too.
